

Reviewing setup-test assignment

- If you're new to the class
- Git fun
- Details

New to the class!

Always some 2nd week shuffles

- Follow links in Canvas Announcements
 - Join class Slack Workspace
 - Get a copy of class github repo
- Watch recording of first class
 - Canvas -> Zoom Meetings -> Recordings
- Do 01-setup-test assignment (in /work)
 - No penalty for new students
 - Ensures you can get/submit work
 - Gives me your account info (!)

Git fun!

git is

- Important to your career
- Important to the class
- Powerful
- Confusing
- Possibly Frustrating

Only add/commit correct files

- No `.idea`, no `.DS_Store`, etc
- No `node_modules/`

Only want files useful to another computer

- Not something specific to yours

Easiest to do with `.gitignore` file

.gitignore file

- Lists file "patterns"
- Matching files will be "ignored"
 - Not shown in `git status`
 - Not used by `git add` or `git rm`

.gitignore scope

`.gitignore` works on the directory (folder) it is in

- And any dirs inside THAT dir

Your repo has a `/work/.gitignore`

- but no base `.gitignore`
- you will want one
- I left it for you to create

<https://git-scm.com/docs/gitignore>

Details in your assignments

- README is a long, detailed list
- Details matter
 - Computers are picky
 - So are bosses and clients
 - So am I :)
- This assignment was small
- Learn for the bigger assignments

Read/Watch!

- I provided an extra slidedeck about git
- I provided readings in the repo ([readings/git/](#))
- These have links to tutorials
 - I will not teach everything in class
 - Many things you will need to practice/read
